SUMMARY

Senior Software Engineer & Module Lead with 9+ years of experience building high-scale, fault-tolerant distributed systems in FinTech. Specialized in payment infrastructure, cryptographic systems, and multi-region architectures, with a strong focus on reliability, consistency, and security at scale

Proven track record of designing systems handling **10K+ events/sec**, **1B+ records**, and **mission-critical payment flows**, with measurable impact on availability, latency, and failure reduction. Known for combining deep system design expertise with pragmatic execution and simplicity

KEY ACHIEVEMENTS

- **Led encryption of 1B+ payment records** during large-scale key rotation, ensuring zero data exposure and maintaining compliance with security standards with near-zero/controlled downtime
- **Designed multi-DC payment SDK** handling 5,000+ TPS with active-active failover across 4 regions, reducing transaction failures from 2% to 0.25%, significantly improving payment success rates
- **Eliminated database lock contention in payment flows** by introducing a Kafka-based CDC pipeline (10K+ events/sec), decoupling OLTP workloads and recovering several hours of annual uptime

SKILLS

- **Languages:** Java
- **Backend & Streaming:** Spring Boot, Microservices, REST APIs, Kafka, Kafka Connect, Zookeeper
- **Distributed Systems:** Active-active multi-dc systems, fault tolerance, cache consistency, clustering (JGroups), 2 PC, SAGA
- **Security & Cryptography:** HSM (Thales, Adyton), PCI DSS, PKI, TLS/SSL, Zero-Trust
- **Databases:** SQL Server (CDC), PostgreSQL, MySQL, Redis
- **Cloud & DevOps:** AWS (EC2, S3, RDS, Lambda, SQS), Jenkins, Linux, Git

WORK EXPERIENCE

Worldline e-Payments (Formerly known as Ingenico ePayments)

Mumbai, India

Module Lead

Sep 2021 - Present

- **Hardware Security Module SDK:** Built a proprietary Java driver for integration with HSM providers (e.g., Thales, Adyton), enabling secure cryptographic operations across services, recognized by CTO for delivering a scalable, production-critical security layer
- **Data encryption key rotation framework:** Architected encryption key rotation pipeline re-encrypting 1B+ records across 50+ apps via simple JSON configs, ensured zero data exposure and near-zero or controlled downtime for applications

- **OLTP Database Isolation:** Architected a Kafka-based CDC pipeline streaming 10K+ events/sec to 5 downstream systems with sub-second latency, decoupling OLTP from read-heavy reporting workloads
- **Active-active HSM Connection Manager:** Built a multi-region, active-active connection manager for HSM services with liveness checks and optimized connection selection (round-robin, prioritizing recently active connections) across 4 sites, reducing failures by 95%
- **Distributed Master Data Consistency Layer:** Built a highly available distributed hashmap-like consistency framework for synchronizing merchant master data across 40 applications using JGroups-based inter-node communication, eliminating centralized state and ensuring strong consistency
- **Zero-Trust Authentication Library:** Developed client and server-side libraries for zero-trust authentication with pluggable providers (including HSM), built on top of HTTPS-based APIs to replace traditional application-level authentication for service-to-service communication
- **Mentorship:** Direct reporting manager of 2 high performance engineers, mentored 20+ engineers/leads on a variety of topics including security, scale and code/database optimization

Futurewise Technologies

Mumbai, India

Software Engineer

Nov 2019 - Sep 2021

- **IFANOW PaaS is a wealth management suite** which superpowers financial advisors and distributors on their day-to-day practise
- Core backend engineer for **IFANOW**, scaling from inception to production, now managing over **₹2 lakh crore investor assets mostly in mutual funds**
- Built **microservices architecture** using Spring Boot, Redis, and AWS Stack (Lambda, SQS, RDS)

Filmboard Movies

Mumbai, India

Software Engineer

May 2019 - Nov 2019

- **Led AWS infrastructure stack** and version control implementation using Git

Amideep Technologies

Mumbai, India

Software Engineer

Jun 2017 - Apr 2019

- **RadioLocus is a location intelligence and analytics platform** using mapping technology for B2B clients including supermalls, airports, and large commercial spaces
- Reduced OpenWRT-based Linux device configuration time from **~5 minutes to 15 seconds**, improving operational efficiency at scale
- Improved system **uptime to 99.5%** via monitoring, logging, and automated health checks

AWARDS AND RECOGNITION

- **Highest Value Contributor (2025)** - Worldline ePayments
- **Top & Excellent Performer (2024)** - Worldline ePayments
- **TechVision 2.0 Hackathon Winner 2nd and 5th place** - Worldline ePayments
- **CTO Recognition** - Exceptional contribution to product security - Worldline ePayments

EDUCATION

B.E. (Computer Engineering) - Mumbai University (2017)

D.G. Ruparel College - Matunga, Mumbai
